

1. PREPARE

Charge the device, install the app, and insert a high-speed microSD card when local storage is desired.

2. MOUNT

Attach TheStake to the keyed anti-rotation mount on the modified reference stake.

3. PAIR

Power on and pair the device through the companion app. Create a project record.

4. SET DTR

Place the reference stake at the initial corner and press Set DTR.

5. SET POINTS

Place exactly three additional stakes at the projected positions. Confirm each point after placement.

6. CAPTURE

Record image and/or LiDAR data at every 10 cm level or enable a timed interval.
